Satisfied users

100%

Adjustment to your needs

Technical information system of new generation

MONACO[®] is a modern specialized software tool to generate, record, and archive technical documentation as well as to plan and manage the subsequent production. Several original functions implemented into the MONACO[®] system have resulted from the long-term experience gained in developing and implementing its predecessor, the SYSKLASS[®] system, which is currently in use in more than 150 manufacturing enterprises.

We have also implemented some unique solutions in the system to simplify the work across different departments in a manufacturing company. The system is adjustable by users and easily helps them get oriented in the existing technical documentation while keeping the full history of changes. It takes advantage of the latest information technologies regarding the internet communication built on the latest software with the support of the Industry 4 new principles.

www.softip.sk/monaco

Cost reduction

A significant cost and time reduction in creating documents for technical preparation of production

Support for preparing a bid

Easier pricing and scheduling of a product delivery process when preparing a bid

Quick feedback

Response time shortening

Speed and flexibility

The processed TPP documentation of products is used as a base for a quick creation of new documentation

Simplicity

The possibility to create the so-called concepts of the technical documentation with a direct application of tools to get quick pricing of future products without the need to create detailed technical documentation for bidding processes

Interconnectability

In combination with the SOFTIP ERP systems they present an ideal coverage of all the needs occurred in manufacturing companies.

MONACO modules and services

Construction

- Drawings, Bills of material, Documents
- Import from several PDM system sources

Technology

- Procedures, Operations, Bills of material
- Mounting instructions
- Source requirements, tools, CAQ, pictures

Job orders

- Production orders
- Possibility to adjust your technical documentation

Calculations

- Calculations for semi-finished documentation
- Calculated costs comparison

Change process

- Data history and audit, change protocols
- Reservation system

Expert modules

- Calculations for material consumption standards (bill of materials)
- Calculations for time consumption standards (operations)

Workflow

- Set of tasks assigned to a change, document, job order
- Solver
- Quick generation by using scenarios
- Notification system

Tools storage room

- Records, Delivery office
- Life cycle monitoring
- Connection with TPV

Planning

- Graphical planning of job orders
- Forward or backward planning of job orders according to their priority
- Graphical views of source application, interchangeability, calendars
- Clustering of planning data
- Material balancing

Bids - CRM

- Administration and support of bidding processes
- Quick, retroactive and verifiable pricing
- Bid configuration by means of valid correspondent products
- Autonomous technical data for the CRM purpose
- Pricing by calculation templates

Production

- Production job orders, Production orders
- Production approval
- Controlling (management of rejected products)
- Cooperation (transfer forms)
- Statistics

System main advantages

Production improvement

By improving the technical documentation accuracy

Flexibility in production

Possibility to correct the current manufacturing process in case of urgent job order changes

Optimization

Optimization of material selection for manufacturing, managing its availability, as well as excessive stock reduction

Automation

Automation of selected processes – reducing the operation requirements (and costs)

Time saving

All data will be put into the system only once and will be automatically transferred into all following processes

Management of means of production

Occupancy and free capacity overview related to the means of production

Reduction of product defects

Complex quality management with a retroactive correction of manufacturing processes

Full compatibility

With the SOFTIP PROFIT PLUS applications to manage the logistics, economics, personnel and wage processes

Seamless communication

Open communication with other systems

Experienced supplier

Our knowledge and know-how gained from many information system implementations in companies from different segments

Wide range of services

Advantages of complex services provided by SOFTIP with 27 years of experience

Drag & Drop

Easy manipulation with full support of the Drag & Drop functions
